9b last postcard code should write to this 10a code

🧪 **Experiment 10a — UI Unit Testing (PostCard Widget)**

Step 1: Create two files

lib/post_card.dart

```
import 'package:flutter/material.dart';

class PostCard extends StatelessWidget {
 final String title;
 final String body;

 const PostCard({Key? key, required this.title, required this.body})
   : super(key: key);

 @override
 Widget build(BuildContext context) {
  return Card(
   margin: EdgeInsets.symmetric(horizontal: 16, vertical: 8),
   child: Padding(
    padding: EdgeInsets.all(16),
    child: Column(
     crossAxisAlignment: CrossAxisAlignment.start,
     children: [
      Text(title, style: TextStyle(fontSize: 18, fontWeight: FontWeight.bold)),
      SizedBox(height: 8),
      Text(body, style: TextStyle(fontSize: 16)),
     ],
    ),
```

```
    ),
  );
 }
}
```

test/post_card_test.dart

```
import 'package:flutter/material.dart';
import 'package:flutter_test/flutter_test.dart';
import 'package:your_project_name/post_card.dart'; // replace with actual project name

void main() {
 testWidgets('PostCard displays title and body', (WidgetTester tester) async {
  await tester.pumpWidget(MaterialApp(
   home: PostCard(title: 'Test Title', body: 'Test Body'),
  ));
  expect(find.text('Test Title'), findsOneWidget);
  expect(find.text('Test Body'), findsOneWidget);
 });

 testWidgets('PostCard widget has correct styling', (WidgetTester tester) async {
  await tester.pumpWidget(MaterialApp(
   home: PostCard(title: 'Test Title', body: 'Test Body'),
  ));

  final titleTextWidget = tester.widget<Text>(find.text('Test Title'));
  expect(titleTextWidget.style?.fontSize, 18);
  expect(titleTextWidget.style?.fontWeight, FontWeight.bold);
 });
```

}

Step 2: Run tests

In the terminal:

flutter test

You'll see:

00:00 +2: All tests passed!
